

ModulDB - Feature #27

move first login code from "mod"-module to seperate module i.e. welcome-page

21.07.2015 10:09 - Daniel Reiche

Beschreibung			
<p>Curently, the code responsible for the handling of the first user request resides in the mod-modules index-action, this should be moved to a simple module by itself. (simple symfony1 module, without CRUD-functionality, just basic welcome page)</p> <p>Accordingly, the routes for / and @loc_home must be changed, thus separating and clarifying the focus of the mod-module.</p>
