

## ModulDB - Feature #28

### use ajaxified admin-views in all other admin-generator-modules

<b>Beschreibung</b>			
<p>The mod-module makes use of ajax code and associated backend logic for some simple improvements in the UI- The js-code in admin_view.js can be used in all the admin-generator-modules as well, just the backend-logic (XHR-Request detection and processing) has to be ported (especially index-action and filter-action). In addition, the js-code has to be included in the templates (or the config of the respective module...), and the other modules should become as ajaxified as the mod-module list.</p> <p>First, it would make sense, to ajaxify just the sorting/pagination and filtering of the object-lists, upgrading the create/edit/delete actions is for a later stage.</p>
